

### Automatic Vegetable Sprializer

The Pro Veg-Sprializer is a stainless steel, heavy duty machine for producing spirals/lace with minimal labour. For this special and premium cut the machine can be used to handle many different vegetables like butternut squash, courgette, carrot, beetroot etc.

The machine is available with many different blade options to achieve a wide range of specialist cuts.

An extremely popular and growing premium market. The standard machine will handle vegetables up to a diameter of 80mm and the special "Plus" version handles products like butternut squash and beetroot up to 150mm in diameter.

### 2, 4 or 6 lane versions.

The machine is available as a 2, 4 or 6 lane version. One operator can handle feeding up to 6 lanes which makes it extremely efficient for such a premium product. The operator simply positions the product on the infeed plate and presses the buttons to signal the machine to proceed. The trap door opens and while the operator loads the next two lanes the first ones are being processed and so on. One operator managing the infeed of a 6 lane machine will be able to achieve up to 400Kg per hour.

### Technical specification

- Stainless steel and food grade materials construction throughout – diamond form frame where possible.
- Letterbox delivery system with loading aperture operated from low pressure pneumatics.
- Internal product carriage to be simply mounted for ease of change-over and hygiene.
- Guarding to simply lift on / lift off with dual channel interlock switches.
- Externally mounted rotary blade RPM control.
- Externally mounted cylinder push speed control.
- Two-hand safety start system.
- Pneumatic soft start system.
